---

The risks of PillCam® capsule endoscopy include capsule retention, aspiration and skin irritation. The risks associated with colon preparation are allergies or other known contraindication to any preparation agents or medications used for the PillCam COLON regimen, according to laxative medication labeling and per physician discretion. After ingesting the PillCam capsule and until it is excreted, patients should not be near any source of powerful electromagnetic fields, such as one created by an MRI device. Medical, endoscopic or surgical intervention may be necessary to address these complications, should they occur. A normal or negative capsule endoscopy examination does not exclude the possibility of colon polyps or colon cancer. Please consult the product user manual or refer to givenimaging.com for detailed information.
